The SPS internal security Grilles give maximum security with minimal disruption. The product is securely fitted into the reveal, inside the property. Tailor made to fit all site conditions and expertly installed by our installation division, and available in a choice of finishes to any RAL Colour.

The installation of the SPS security Grilles is a visible deterrent to any would be vandals, offering a physical barrier with an acceptable level of security, whilst allowing windows to be easily cleaned and an exit in case of emergency.

Technical Information

The SPS Grilles are a fabricated welded construction with a perimeter frame of 20 x 20 x 16 wg mild steel square tube to B.S. 6323. The infill unit is manufactured from profiled mild steel plate with a thickness of 5mm to B.S. 10025 : 1990. The pattern for the infill is 200 mm (LWM) x 100 mm (SWM) with a strand thickness of 8mm. The Grille is then treated with a Polyester Powder Coated Finish to B.S. 1722 : Part 6.

If opening sashes are to be incorporated within the infill unit, they will be installed with two tubular latches operated by thumb turns by the Tenant.

The Grille is secured by chemical resin fixings at each corner and supplementary fixings as required. A pre-installation survey will be carried out by our technical advisory division. This product can be purchased on a supply only basis.
